Problem Statement AI/ML Domain

Ralph got Vanellope to join an academic institution and unlike in Sugar Rush, she is having a hard time in improving her performance. It seems that most of the students are also facing the similar situation like Vanellope. The institution is trying to identify weak students to help them by providing extra lectures and personal attention. Your team has been hired by Fix-It Felix Jr to fix this problem and create a technical solution which will identify the weak students based on their past performance so that proper guidance is given before their final exams.

Problem Statement Web/App Domain

In the Mushroom kingdom, Mario wants to help Luigi set up a new warehouse. They hire your team to develop a software to manage the inventory in this upcoming warehouse. Your job as a developer is to create a software that will help them monitor the goods that enter and exit the premises, calculate the inventory stock value and generate reports that will help to give the brothers an insight about their warehouse and so on. You are free to add more features to this software as Mario promises to pay you highly in (mushroom) coins.
